Sales@SpringPT.com

spring pointTM family of products

Our flagship product, **MotorBase**, is an ERP system that began in a motor repair shop in 1995. With job costing, job tracking, time clock, new sales, inventory, accounting, and more, MotorBase is everything you need to operate an apparatus repair business.

MOTORBASE[®]

Spring Point CRM strikes the balance between features and simplicity. Track all your prospects, customers, contacts and opportunities. Manage your sales team. Do it all from your mobile device.

Customer Web Portal

The **Web Portal** allows you to grant your customers access to specific quote, job, equipment, invoice, and inventory information based on protocols you assign. Not sold as a stand alone product.

EM

the equipment management solution

CRM

spring point

The **Equipment Management** solution allows you to classify, organize, and track thousands of equipment items and associated documents either for your own company or as part of an equipment management service you provide to your customers.

QM WIZARDTM

The **Quality Management Wizard** transforms your unique forms and reports into an electronic checklist and data capture tool. Increase efficiency and productivity. Standardize work. Receive alerts when failures occur and eliminate the cobbling together of reports from hand-scratched paper forms and jump drives of jumbled images. The QM Wizard completes professional final reports as the work is accomplished.

The arrows represent integration & real-time information flow between systems.
